Transforming communities to self-reliance and resilience

BUILD HOPE UGANDA ORGANIZATION PROFILE

A message from the Executive director of Build Hope Uganda

*As reduction on food ration pursues, adverse effects hit my fellow refugees within Kyangwali refugee settlement and they developed diverse challenges within their households including violence, child neglect, divorce, early marriages, malnutrition, theft and robbery, increased cases of school dropout, increased cases of tree cutting, wetland encroachment. Partners providing humanitarian support couldn't meet all the needs of the vulnerable refugee's and didn't probe exactly **"what a refugee wants to survive"**, by the fact that am a fellow refugee and always have time to mingle with these refugee communities' including women and men, youth, widows, child mothers, orphans, persons with disability and child headed households. The adverse shift in trends of humanitarian support inspired me to start an advocacy humanitarian refugee led organization called **"Build Hope Uganda"** to specifically respond to the critical needs of my fellow communities, empower local voices to be heard at settlement, district and national levels for local impact. This aimed at enhancing sustainability in the local communities by promoting an integrated approach in five programs (**Livelihoods, Energy & Environment, Wash, Education and GBV**), which enabled vulnerable refugees and neighboring host communities to create opportunities for themselves and transition from challenges emanating as results of displacements and reduced food ration cuts using fewer resources to access comprehensive support.*

As Build Hope Uganda we really extend our sincere appreciation of support and coordination role rendered to us by OPM and UNHCR for entirely networking us with other implementing partners. We also extend our appreciation to partners who have continuously supported and partnered with Build Hope Uganda in providing humanitarian assistance within Kyangwali refugee settlement and Build Hope Uganda will continue honoring your invitations for partnership and grants application during service delivery.

About Build Hope Uganda (BHU).

Build Hope Uganda (BHU) is a refugee led organization (RLO), a national humanitarian and development agency that work to reduce people's vulnerability through supporting them to realize their potential, build on their own assets/resources and respond to their own problems and needs to attain self-reliance and resilience.

Build Hope Uganda (BHU) was formalized by passionate refugee youth on 16th October 2020 upon realizing the critical needs of the most vulnerable communities (women and men, youth, widows, child mothers, orphans, persons with disability and child headed households) within Kyangwali refugee settlement and the neighboring host communities with the aim of transforming them to self-reliant and resilient households using their own assets/resources.

Build Hope Uganda (BHU) supports humanitarian and development work in Kyangwali refugee settlement, Kyangwali Sub County, Kikuube District in South western part of Uganda. Our programs promote community driven initiatives where marginalized refugees and rural populations are supported through sustainable, durable initiatives.

Transforming communities to self-reliance and resilience

BUILD HOPE UGANDA ORGANIZATION PROFILE

The organization operates in an integrated humanitarian development approach while focusing to bridge the gap/challenges in five thematic areas (**Livelihoods, Energy & Environment, Wash, Education and GBV**) in order to contribute to the well-being of the marginalized communities. By promoting an integrated approach in five programs, Build Hope Uganda aims to create opportunities that enable vulnerable refugees and neighboring host communities to transition from challenges including displacements, food ratio cuts, school dropout, dependency, green innovations and open defecation to economically resilient communities.

VISION

To ensure the most vulnerable refugee communities (women and men, youth, widows, child mothers, orphans, persons with disability and child headed households) are supported with employable skills while fostering economic empowerment, social integration, community based protection and climate action techniques.

MISSION

To empower the most vulnerable refugee communities (women and men, youth, widows, child mothers, orphans, persons with disability and child headed households) to attain self-reliance and resilience through durable solutions.

GOAL To reduce people's vulnerability and make them realize their potential while building on their own assets/resources to respond to their own problems and needs to attain self-reliance and resilience.

OUR MOTTO: Transforming communities to self-reliance and resilience.

TARGET BENEFICIARIES

Our programs are primarily designed to suit the needs of individual owners/care givers/groups/Associations/self-employed persons/ Micro, Small and Medium Scale Enterprises (MSMEs) who are in need of humanitarian and development support/services. Most of our target beneficiaries are resource constrained and are located in rural and peri-urban areas. Our beneficiaries are categorized as follows; • **Youth (15-35 years)**; this category includes unemployed out-of school and school going youth • **Old people (above 35 years)**; with a special focus on women, **vulnerable communities/households; victims of conflicts/catastrophes** including **women and men, youth, widows, child mothers, orphans, persons with disability and child headed households**, • Our services are also available to **Churches and cultural institutions**.

CORE VALUES:

Inclusion and participation: Build hope Uganda runs its operations together with community's participation in any empowerment program. Programs are implemented based on the community's decision especially in identifying challenges and solutions to their own problems.

Non Discrimination: The organization programs/services will be provided to all the targeted populations regardless of gender, religion, tribe, nationality and occupation, the programs are also designed to include persons with disability.

Integrity and accountability: All programs will be implemented while executing transparency, accountability and responsible stewardship of resources.

Transforming communities to self-reliance and resilience

BUILD HOPE UGANDA ORGANIZATION PROFILE

Innovation and creativity: Build Hope Uganda applies analytical thinking and innovative approaches in consultation of communities while developing programs to address complex challenges on social economic, community based protection and environmental programs.

Sustainability and resilience: Programs are designed to transform communities to their comfort zones (self-reliance).

Do No Harm: The programs are designed in commitment to prevent and alleviate adverse consequences of aid on affected populations.

PROGRAM CONTEXT

Uganda host the largest population of forcibly displaced and stateless persons (FDSPs) at 1,927,593 refugees and asylum-seekers, with 52.7 % of these originating from South Sudan, 32.7% from the Democratic Republic of the Congo, 4.4% from Sudan, 3% from Eritrea, 2.6 % from Somalia, 2.3% from Burundi, 1.3% from Rwanda, and 0.9% from other countries¹. While 8.2 % of refugees are located in the capital city Kampala, the vast majority (91.8%) is spread over the 13 settlements where 78% of DDSPs are women and children, and 52% under 18 years¹. These arriving in Uganda due to conflicts from their home countries, and those that exist in settlements and host communities strain the response capacity of humanitarian actors to respond to their essential needs such as limited access to adequate and nutritious food, Health, WASH services, cooking fuel, and shelter. Kyangwali refugee settlement in Kikuube is home to 151,806 of which 81% are women and children².

The majority of refugees in this settlement rely on humanitarian assistance for their daily well-being and crop production using land within the settlement. This situation is expected to deteriorate further due to ration cuts. Although GFA is provided monthly, there is still food scarcity, as most households do not have enough food for own consumption.

Production and the high prices in the local markets limit the ability to meet the Minimum Expenditure Basket (MEB). Because of reliance on the same foods that are consumed, the Minimum Dietary Diversity (MDD) and Minimum Acceptable Diet (MAD) are very low in this refugee settlement. The challenge of sourcing for food attributes to disruption of green vegetation due to increased demand of land for crop production and communities have continued cutting down trees and farming within the wet-lands. Build Hope Uganda is engaged in promoting sustainable land use and wetland restoration through application of Climate Smart Agriculture practices (CSA) and environmental conservation techniques.

Refugees have been disrupted in their formal education due to displacement thus leading to school dropout hence left with the challenge of accessing quality education, vocational skills training and other employment opportunities. Build Hope Uganda promotes functional adult literacy learning programs and vocational training skills in different verticals to complement the education program within Kyangwali refugee settlement.

In Kyangwali refugee Settlement, poverty has highly exacerbated GBV with the communities largely relying on humanitarian aid for their survival. Some of the causes of GBV have been attributed to land conflict, polygamy with

¹ <https://data.unhcr.org/en/country/uga>

² Statistics - OPM (proGres)

Transforming communities to self-reliance and resilience

BUILD HOPE UGANDA ORGANIZATION PROFILE

reasons cycling back to lack of economic opportunities for both men and women. From the needs assessment conducted by African Agency for integrated development (AAID) it's found out that daily collection of firewood is a female responsibility, which often makes women more vulnerable to SGBV. Female refugees collect firewood from forests within the settlement and adjacent areas bordering a Ugandan army barracks and there have been reports of sexual harassment and abuse³. Moreover, the results from the safety protection reports indicates that collecting firewood in the host community and fetching water at night hours due to congestion at water sources as well as dark and isolated spots exposes girls and women to risks of sexual violence. Build Hope Uganda therefore strives to mitigate GBV associated risks and will refer cases for further handling to other implementing partners.

The average latrine coverage within Kyangwali refugee settlement is below, as compared to the 85% desired standard by UNHCR. The low coverage is attributed to existing knowledge gaps on good hygiene and sanitation practices coupled with bad cultural beliefs in some refugee settlements. This further exacerbated by limited resources, non-durable latrine facilities and increase in refugee population and hence, exposing the persons of concern to risk of WASH related diseases. The sanitation situation for the persons of concern is still low due to cultural practices, aging of available facilities and collapse due to poor soil texture in some areas and as such there is need for build Hope Uganda to intensify behavior change activities towards promotion of construction of sanitary facilities to promote improved access to safe and adequate sanitation facilities across the settlements.

Despite strong policy frameworks like the progressive Refugee Act (2006) and Refugee Regulations (2010) that provide refugees with the right to work, freedom of movement, and access to education and health services, fostering a development-based approach that promotes self-reliance and the policy environment supported by initiatives such as the Settlement Transformation Agenda (STA) and Uganda's National Development Plan IV (NDP IV) 2025/26-2029/30, the reality on the ground presents significant challenges. Refugees and host communities are increasingly affected by economic hardships, exacerbated by the impacts of climate change on agricultural productivity. Livelihood opportunities are scarce, and the reduced funding for refugee support further compromises the well-being of vulnerable populations.

THEORY OF CHANGE

In view of the above, Build Hope Uganda is a refugee led organization that leverages on five program components (**Livelihoods, Energy & Environment, Wash, Education and GBV**) in an integrated manner, complementing on one another while layering on humanitarian activities with development outcomes and commitment to continue building resilient communities, promoting climate actions, social justice, and ensuring that the rights and dignity of all individuals are upheld, protected and fulfilled; by strengthening communities and boosting up their competences and mindset, our services enable vulnerable women and men, youth, widows, child mothers, orphans, persons with disability and child headed households to scale commercially with climate resilient livelihoods and increase diversity of organisms and sequester of GHGs through integrated appropriate agroforestry options for sustainable land management practices on livelihoods enhancement and biodiversity conservation. As a result, they provide goods and services more competitively, earn higher incomes, create more decent jobs and contribute to the development/strengthening of supply/value chains, improvement of livelihoods of urban and rural communities and growth of local and national economies.

Transforming communities to self-reliance and resilience

BUILD HOPE UGANDA ORGANIZATION PROFILE

PROGRAM JUSTIFICATION

As Uganda continues to experience shifting dynamics of refugees and asylum seekers due to instabilities in the Great Lakes Region, the effects impact on the overall national development agenda thus calling for a multi-sectorial approach to address these developments. Coupled with the global challenges of diminishing aid support, pose difficulties for Government and other humanitarian and development actors in addressing the increasing needs of refugees. Implementation follows the new programmatic shift that aims to ensure operational efficiencies and effectiveness, and revised programme implementation approaches to better leverage and maximize Build Hope Uganda's expertise and comparative advantage towards delivering quality and timely services with increased synergies within its programs". WFP, UNHCR and implementing partners are in the third phase of prioritizing and rationalizing assistance, which includes food ration cuts, while also emphasizing the transition of refugees from dependency on relief to sustainable livelihood strategies for self-reliance that Build Hope Uganda intervention aims to address. With this context, both refugees and host communities continue to experience hunger, malnutrition, and lack of fundamental necessities. Refugee households face food deficits due to (i) dependence on a single source of livelihood, mainly general food rations; (ii) limited access to land, low subsistence agriculture production and productivity; (iii) inadequate farming knowledge and skills, and limited access to good storage facilities; (iv) land degradation and climate change; (v) limited access to markets; and poor financial inclusion, especially low access to credit. Competition over natural resources is affecting both refugees and host communities and therewith the social cohesion within and between communities. Build Hope Uganda multisectoral approach and vast experience in humanitarian response will take advantage of its integrated programming, cost efficiency, complementarity of already running interventions to reflect its commitment to local empowerment and advocacy for transformative change in Uganda's humanitarian and development landscape using a community-based, integrated, and Human Rights-Based Approach.

To address these challenges, Build Hope Uganda will build on integrating five program components. The proposed activities will serve as robust and complementary initiatives to on-going projects within Kyangwali refugee settlement such as the sustainable Markets Inclusive Livelihoods Pathways to Self-Reliance (SMILES) by AVSI, Development Response to Displacement Impacts Project (DRDIP) under the Office of the Prime Minister (OPM), the Fresh Food Voucher nutrition project by Action Against Hunger (ACF), Agriculture and Market Support by Ripple Effect, Asset Creation and Livelihoods by the World Food Programme (WFP), and vocational training, among others. Build Hope Uganda will also apply the Social Ecological Model through model groups campaign on latrine coverage, sanitation and hygiene practices at both household and community level. Through a multisectoral approach, Build Hope Uganda is able to do more with fewer resources, providing comprehensive support to the most vulnerable.

THE APPROACHES.

Build Hope Uganda program is implemented alongside the approaches below:

Community based approach

Communities will be engaged in consultative meetings especially in assessing their critical needs. All programs/interventions are developed based on the community's decision and discussions will form a basis of decision making.

Integration:

Transforming communities to self-reliance and resilience

BUILD HOPE UGANDA ORGANIZATION PROFILE

Build Hope Uganda multisectoral approach and vast experience in humanitarian response will take advantage of its integrated programming, cost efficiency, complementarity of already running interventions to reflect its commitment to local empowerment and advocacy for transformative change in Uganda's humanitarian and development landscape using a community-based, integrated, and Human Rights-Based Approach.

Co-create and adapt

To achieve our intended results, we need to continuously collaborate with our beneficiaries in the creation of programs and services. We will employ human centered design tools and frameworks to co-create programs and projects and continuously adapt to trends, developments, and changes in the systems we work in. We adapt/customize our programs to cater for peculiar needs of vulnerable groups including women and men, youth, widows, child mothers, orphans, persons with disability and child headed households.

Farmer field school approach

A farmer field school is the farmers centered learning approach where farmers make their own decisions in their own fields/gardens. It enables farmers raise solutions to their own problems. The approach empowers farmer's ability and experience in knowledge sharing especially regarding marketing their commodities.

Role Model approach:

To exacerbate sanitation situation for the persons of concern that still exists due to poor cultural practices, aging of available facilities and collapse due to poor soil texture in some areas and as such there is need for build Hope Uganda to intensify behavior change activities towards promotion of construction of sanitary facilities using role model households within the targeted communities to promote improved access to safe and adequate sanitation facilities across the settlement.

Farming As A business-FAAB

Farming as a business is applied for the targeted households and this is enhanced with complementary trainings on financial literacy, business skills and planning. The engagement with communities involve networking with other key stakeholders including ZARDI, agro input dealers, farmer associations and this is incorporated with contract farming while safeguarding the interest of farmers. Farmers are involved in market linkage meetings with different actors and their fields/gardens are insured for safety and risk compliance.

Village Savings and Loan Association (VSLA).

Build Hope Uganda program promotes communities to adopt the VSLA methodology in order to enable them sustain their value chains. The best practice of savings within the rural setting will ensure that, farmers have the ability to overcome their own challenges especially during the processes of managing their value chains. Trainings on VSLA methodology will be facilitated continuously especially on the group meeting days and the VSLA groups will be transformed into Sacco's while emphasis will be on digitalizing their savings approach.

Rights based approach (RBA):

Build Hope Uganda while building resilient communities, promotes social justice, and ensures that the rights and dignity of all individuals are upheld, protected and fulfilled in all the planned programs.

Transforming communities to self-reliance and resilience

BUILD HOPE UGANDA ORGANIZATION PROFILE

PROGRAM STRATEGY

Build Hope Uganda's Strategic Plan, 2026-2030, with a long-term focus on integrating humanitarian activities with development outcomes fits well with UNHCR-coordinated Uganda Response Plan emphasizes on a Human Rights Based Approach to development and humanitarian assistance and the 'local to global to local' (L2G2L) approach, through which Build Hope Uganda empowers local voices to be heard at settlement, District and national levels for local impact. Aiming to enhance Build Hope Uganda impact and sustainability in the local communities where Build Hope Uganda will focus on five thematic areas (**Livelihoods, Energy & Environment, Wash, Education and GBV**). The proposed program complements the Government of Uganda's policies and strategies (including CRRF and ReHOPE), Uganda's National Development Plan IV, the Kikuube district's local government plans, Sustainable Development Goals No. 1 (No Poverty), No. 2 (Zero Hunger) No 6. (Clean Water and Sanitation), No. 8 (Decent Work and Economic Growth) No 12. (Responsible Consumption and Production), No 13 (Climate Action) and No. 17 (Partnerships for the Goal). Overall the program will contribute towards the achievement of the UNHCR-coordinated Uganda Response Plan and WFP Country Strategic Plan (SO2): Refugees and Ugandans in targeted areas, especially women and young people, benefit from a strengthened food system and diversified livelihoods to enhance their resilience to withstand shocks, increase their consumption of healthy food and advance their self-reliance by 2030." In addition, Implementation will follow the new programmatic shift that aims to ensure operational efficiencies and effectiveness, and revised programme implementation approaches to better leverage and maximize Build Hope Uganda's expertise and comparative advantage towards delivering quality and timely services with increased synergies within its programs".

THE FUNDING BACKGROUND:

Build Hope Uganda program became operational since 16th October 2020 with support and in partnership with other implementing agencies (OPM, UNHCR, NSAMIZI, and Bishop Stuart University) within Kyangwali refugee settlement. These included taking lead in the role of creating awareness on environmental conservation measures, behavioral change on latrine use and conducting trainings on vocational skills. In April, 2025 Build Hope Uganda signed an MOU worth 1269 US dollars, equivalent to 4,695,000 UGX with Bishop Stuart University to conduct skills development training for 15 youth students on sandal making. Build Hope Uganda embraces and calls for any donor support to aid its programs and complement the services provided by other partners including Kikuube District Local Government. In order to boost up the organization resources/funds, Build Hope Uganda will be participating in calls for proposal development especially for open grants and also continue networking with other partners for funding opportunities.

As one of the sustainability approaches in humanitarian and development work, Build Hope Uganda staff took an initiative and started a Village Savings & Loan Association (VSLA) scheme where staff is contributing both savings and social fund. Build Hope Uganda staff also agreed that the social fund contributions will be put aside to support office operation costs but the shares of the savings will remain in the names of each staff who are having access to credit from the scheme to meet their basic necessities. The accumulated savings are shared at the end of the savings circle amongst staff in order to promote asset creation.

While waiting for funding opportunities and working closely with other Partners, Build Hope Uganda will continue providing voluntary services to communities especially in the thematic areas of their interventions.

RISKS AND MITIGATION STRATEGIES

Based on past experiences in Kyangwali refugee settlement, several key risks have been identified that may hinder program implementation and achievement of objectives. These include gender biases and cultural norms that limit women's access to digital financial services, low literacy levels, and cyber security vulnerabilities. Additionally, some beneficiaries may be reluctant to use digital platforms due to transaction fees, while poor network connectivity in remote areas can further limit access. Unpredictable and extreme weather events such as droughts, floods, disease outbreaks, and pest infestations caused by climate change continue to disrupt agricultural activities. Access to sufficient farmland remains limited, and conflicts between host and refugee communities—or among different refugee sub-groups pose additional risks. There is also limited willingness from private sector actors to support project participants, often due to a focus on profit.

Other notable risks include rising inflation and economic downturns, which drive up costs; corruption, misappropriation, and theft of program resources; breaches of child and adult safeguarding policies; and an

INFRASTRUCTURAL CAPACITY

The organization hires motorcycles to enable staff carry out field activities. Focal point officers and Community Based Agents are supported with transport means to reach the targeted beneficiaries throughout the project.

Computer Equipment: Printers, Telephone and Internet relatively large amounts of data relating to projects have to be amalgamated, stored and shared. Build Hope Uganda uses tablet phones and manual data collection sheets to collect and store data. Computers also support in storing and managing data including preparing reports, budgets and work plans. Build Hope Uganda attaches great importance to the documentation of results for the purpose of reporting and popularizing the various projects. These computers are also used to document success stories, best practices and lessons learnt among others.

Equipment's & office furniture:

Build Hope Uganda has its office premise located at Red Cross Building (recreation center for youth) and connected to electricity as a power source. Build Hope Uganda staff uses safety Protective Equipment's including, 2 pairs of Gum boots, 2 pairs of Safety shoes and 2 Helmets. The office is also equipped with 2 office tables and 4 office seats which are always shared by staff.

Transforming communities to self-reliance and resilience

BUILD HOPE UGANDA ORGANIZATION PROFILE

Financial and Administrative Capacity

The finance and administration department is headed by a competent staff who reports to the Executive Director. The finance and administrative processes are guided by the finance and administrative policies and procedures manual.

Internal controls:

Build Hope Uganda maintains various internal controls and checks at different levels and these include separation of duties and responsibilities, written procedures, job descriptions, levels of authorization, accurate record keeping and periodic management reviews and testing to ensure compliance. Management periodically makes a systematic review of the systems to ensure controls are being correctly interpreted and applied.

Build Hope Uganda hires external auditors to audit the organization and various donors also audit our projects periodically.

Human resource management:

Build Hope Uganda follows proper human resource guidelines as stipulated in the human resource policy manual which stipulate staff obligations, travel rights, recruitment and selection procedures, staff leave, disciplinary procedures, reward system, travel costs and allowances. Every staff has a written contract. Renewal of contracts is dependent on the annual performance appraisal and availability of funds to implement projects. All recruited staff is required to sign and adhere to the child protection and sexual harassment policy.

Procurement:

Build Hope Uganda adheres to the procurement guidelines in the procurement procedures manual. Build Hope Uganda has a procurement committee which comprises of the, Executive Director, program coordinator, business development manager, Finance and Administrator who always adhere to the procurement policy and procedures.

Asset management:

Build Hope Uganda goal is to ensure optimal utilization of all assets. We keep an asset register where all assets are registered as and when they are acquired. The Finance and Administration Officers always ensure that all equipment's are serviced regularly and inspected by the Donor. All assets are engraved.

COORDINATION AND PARTNERSHIP

The increased emphasis on localization, scaling and contribution to transformation of systems compels us to build more comprehensive and strategic partnerships with organizations interested in the people and contexts we are looking to impact. As one of numerous actors, we contribute to transforming systems by catalyzing fund raising and implementation partnerships. Central to our success has been strategic collaboration with, OPM, UNHCR, WFP and Kikuube District Local Government and other implementing/operating partners (AVISI, FCA, FRC, Bishop Stuart University, NRC, NSAMIZI, LWF, HADS, HAF Uganda, HFU, CARITAS, SAVE the Children and PLAN) involved in provision of humanitarian and development services. Build Hope Uganda continues layering its services to communities in partnership of refugee led agencies, including P4T, BUAK, THEHESA, GO-useTech and RYRUID. Build Hope Uganda has also created strategic partnerships with financial service providers, input suppliers and VSLA groups. Working in partnerships is essential to our success and enables us to access the resources, tools, models,

Transforming communities to self-reliance and resilience

BUILD HOPE UGANDA ORGANIZATION PROFILE

training materials (games, posters and templates), information and expertise required to effectively implement/deliver and scale/replicate our approaches/programs. How we engage with others and how others engage with us, will increasingly shape our brand, reputation and credibility in our programming. We will always act in solidarity and partnership with a unique network of global, national and community-based corporations (financial service providers, off-takers and input suppliers), nonprofit organizations (NGOs, CBOs and business associations) and Government agencies driving systemic, inclusive, and sustainable transformation into self-reliance and resilience. We will map and analyze the local and international actors, listen to their needs and build strategic collaboration. We will pay particular attention to collaborating with organizations led by women, young people and marginalized groups.

MONITORING AND EVALUATION FRAME WORK

Build Hope Uganda has a MEAL Focal point person that ensures, quality, compliance and reporting, this is well executed into its programs. The programs will be designed and aligned with the Logical frame works which will describe the Goal, objectives, indicators, activities, risks and assumptions of the projects. Build Hope Uganda's program runs chronologically with baseline, midterm and end line surveys which form a basis of program achievements. Projects are monitored continuously by build Hope Uganda staff and unexpected outcomes are documented to guide in the next planning phase of the project. Build Hope Uganda conducts quarterly post distribution monitoring for its project activities and data generated will build on the narrative quarterly and annual reports shared with Donors. In addition, the MEAL focal point person develops program implementation tools that guides the implementation team in tracking the project progress, these tools are designed in KOBO Collect or Activity info system.

Build Hope Uganda uses tablet phones and manual data collection sheets to collect and store data. These devices including computers also support in storing and managing data including preparing reports, budgets and work plans. Build Hope Uganda attaches great importance to the documentation of results for the purpose of reporting and popularizing the various projects. These devices are also used to document success stories, best practices and lessons learnt among others.
